

Bookmark Turning and Assembly Instructions

There are many ways to do this, but probably the easiest approach is to use the waste block system.

- Cut the piece to be turned slightly larger than the final thickness. Bring down to just greater than the final diameter on the band saw.
- Glue this piece to a waste block, then turn to desired shape and correct diameter.
- Finish with HUT and remove with a parting tool.
- Glue into bookmark with epoxy or super glue.
